

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application. While no claims have been amended, added or cancelled, the claims are presented below for the convenience of the Examiner.

1. (Previously presented) A subscriber terminal comprising:
 - a transceiver configured to receive calls and messages;
 - a control unit connected to the transceiver configured to save received unanswered call data, save received messages, and to constitute a collection of both received unanswered call data and at least one saved text message by combining together the unanswered call data and messages, which both refer to the same caller, into a single contact attempt related to the caller, wherein content of the text message is descriptive of a reason for the unanswered call data; and
 - a user interface connected to the control unit and configured to present the contact attempt together with the content of the text message to indicate the reason for the unanswered call data.
2. (Canceled)
3. (Previously presented) The subscriber terminal of claim 1, wherein the control unit is configured to find a reference to the same caller if both the unanswered call data and the message both contain the same caller identifier.
4. (Previously presented) The subscriber terminal of claim 1, wherein the control unit is configured to display in the user interface the contact attempt within a list of contact attempts.
5. (Original) The subscriber terminal of claim 4, wherein the control unit is configured to display the list of contact attempts as a list of callers.

6. (Previously presented) The subscriber terminal of claim 1, wherein the control unit is configured to receive a selection regarding the contact attempt from the user interface and to display the selected contact attempt in more detail in the user interface.

7. (Previously presented) The subscriber terminal of claim 1, wherein the control unit is configured to fetch a name for the caller present in the contact attempt from a phonebook and to display the name of the caller in the user interface.

8. (Original) The subscriber terminal of claim 1, wherein the control unit is configured to display in the user interface a selection mechanism, which, when selected, makes a contact to a caller of the selected contact attempt.

9. (Canceled)

10. (Previously presented) An arrangement comprising:

receiving means for receiving calls and messages;

saving means for saving received unanswered call data and saving received messages;

constituting means for constituting a collection of both received unanswered call data and at least one saved text message by combining together the unanswered call data and messages which both refer to the same caller, into a single contact attempt related to the caller, wherein content of the text message is descriptive of a reason for the calls; and

presenting means for presenting the contact attempt together with the content of the text message to indicate the reason for the calls.

11. (Canceled)

12. (Previously presented) The arrangement of claim 10, wherein the constituting means finds a reference to the same caller if both the unanswered call data and the message both contain the same caller identifier.

13. (Previously presented) The arrangement of claim 10, wherein presenting means displays the contact attempts within a list of contact attempts.

14. (Original) The arrangement of claim 13, wherein the presenting means displays the list of contact attempts as a list of callers.

15. (Previously presented) The arrangement of claim 10, wherein the presenting means receives a selection regarding the contact attempt and displays the selected contact attempt in more detail.

16. (Previously presented) The arrangement of claim 10, wherein the presenting means fetches a name for the caller present in the contact attempt from a phonebook and displays the name of the caller.

17. (Original) The arrangement of claim 10, wherein the presenting means displays a selection mechanism, which, when selected, makes a contact to a caller of the selected contact attempt.

18. (Canceled)

19. (Previously presented) A method comprising:

receiving calls and messages;

saving received unanswered call data and received messages;

constituting a collection of both received unanswered call data and at least one saved text message by combining together the unanswered call data and messages which both refer to the same caller, into a single contact attempt related to the caller, wherein content of the text message is descriptive of a reason for the calls; and

presenting the contact attempt together with the content of the text message to indicate the reason for the calls.

20. (Canceled)

21. (Previously presented) The method of claim 19, wherein a reference to the same caller is found if both the unanswered call data and the message both contain the same caller identifier.

22. (Previously presented) The method of claim 19, further comprising: displaying the contact attempt within a list of contact attempts.

23. (Original) The method of claim 22, further comprising: displaying the list of contact attempts as a list of callers.

24. (Previously presented) The method of claim 19, further comprising: receiving a selection regarding the contact attempt and displaying the selected contact attempt in more detail.

25. (Previously presented) The method of claim 19, further comprising: fetching a name for the caller present in the contact attempt and displaying the name of the caller.

26. (Original) The method of claim 19, further comprising: displaying a selection mechanism, which, when selected, makes a contact to a caller of the selected contact attempt.

27. (Canceled)

28. (Previously presented) A computer program storage medium readable by a computer and encoding a computer program of instructions for executing a computer process for presenting contact attempts to a subscriber terminal of a radio system, the process comprising:

 saving received unanswered call data and received messages;
 combining together both received unanswered call data and at least one saved text message which both refer to the same caller, into a single contact attempt related to the caller, wherein content of the text message is descriptive of a reason for the unanswered call data;
 and

presenting the contact attempt with a user interface of the subscriber terminal together with the content of the text message to indicate the reason for the unanswered call data.

29. (Canceled)

30. (Previously presented) The computer program storage medium of claim 28, wherein a reference to the same caller is found if both the unanswered call data and the message both contain the same caller identifier.

31. (Previously presented) The computer program storage medium of claim 28, further comprising: displaying the contact attempt within a list of contact attempts with the user interface.

32. (Previously presented) The computer program storage medium of claim 31, further comprising: displaying the list of contact attempts as a list of callers with the user interface.

33. (Previously presented) The computer program storage medium of claim 28, further comprising: receiving a selection regarding the contact attempt and displaying the selected contact attempt in more detail with the user interface.

34. (Previously presented) The computer program storage medium of claim 28, further comprising: fetching a name for the caller present in the contact attempt and displaying the name of the caller with the user interface.

35. (Previously presented) The computer program storage medium of claim 28, further comprising: displaying a selection mechanism with the user interface, which, when selected, makes a contact to a caller of the selected contact attempt.

36. (Canceled)

37. (Previously presented) The computer program storage medium of claim 28, the storage medium comprising a computer readable medium, a record medium, a computer readable memory, a computer readable software distribution package, and a computer readable compressed software package.

38-41. (Canceled).
